

Made-in-India

Enterprise Grade Cloud Infrastructure Provider

Grow with Xloud

Xloud empowers to create, manage, and scale products and operations with **confidence**. We provide **elastic foundation** essential for business's growth by offering advanced **sandboxing** tools, to customize and optimize dynamic infrastructure effectively, which is designed to adapt seamlessly with evolving needs, ensuring the infrastructure is as agile and **resilient** as business demands.

Keeping India's innovation on India's Cloud

Xloud Infrastructure

In a world where businesses demand control and flexibility, the cloud isn't just a tool for optimization—it's a strategic necessity. Embracing cloud technology positions enterprises to thrive in an ever-evolving market, providing the agility and scalability essential for long-term success.

Powered by

Our cloud solutions are expertly crafted to meet the needs of organizations seeking secure, scalable, and cost-efficient cloud infrastructure, ideal for building and expanding business operations. These robust cloud environments are perfectly suited for managing intensive workloads consistently over extended periods. With data security as our top priority, our technology provides superior data redundancy, ensures high availability, and upholds stringent security measures to safeguard your operations at every level.

Benefits Complementing Xloud's Deployment

Managed cloud infra support

Freedom with no vendor lock-in

Connection between multiple locations

Data resiliency for business continuity

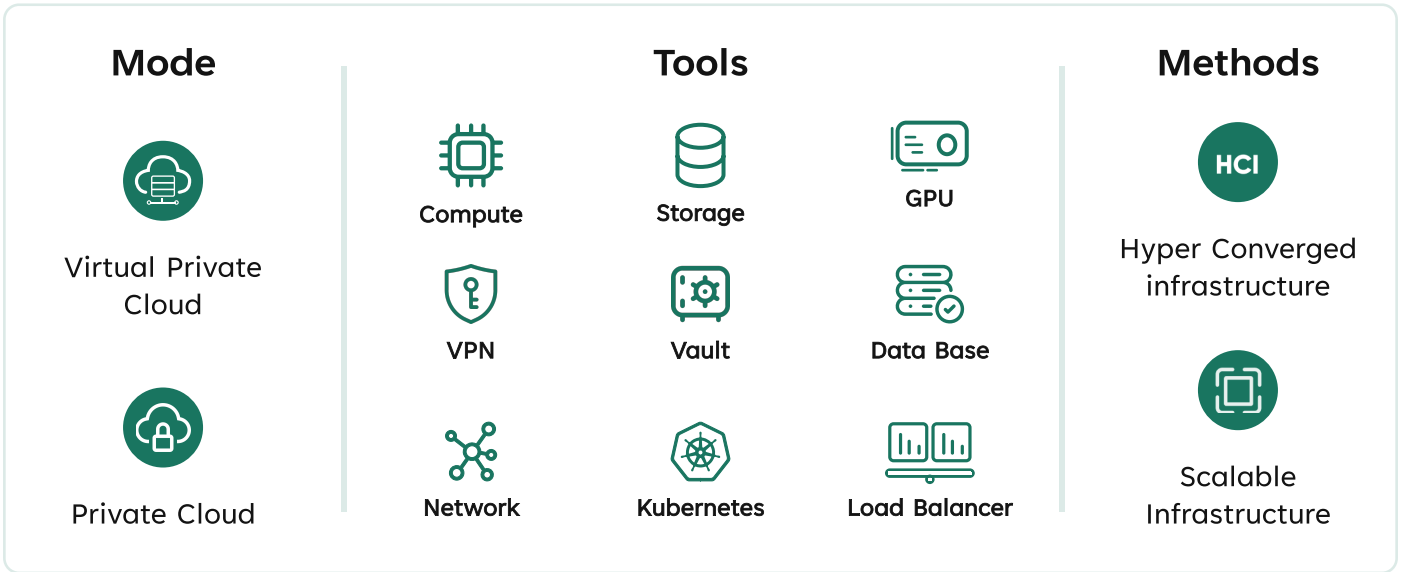

Centralized logging, alerting and real-time analytics with EDR

Migration with infra environment controls

Xloud's Deployment

- Built with Open Source
- Prevent infra outages proactively
- Integrated Kubernetes Service
- AI/ML ready infrastructure
- Maintain day-2 performance and operations
- Infrastructure designing and structuring
- Designed for diverse workloads
- Balancing Security and Innovation

About Us

Xcloud stands out as a wholly Indian enterprise, leveraging expertise in **developing, managing, and securing** scalable cloud infrastructure tailored for enterprises.

Our seasoned team has a proven track record, having engineered private cloud environments for prestigious clients including Harvard University, Unity 3D, Epic Games, and Riot Games. We specialize in transitioning enterprises from public to private clouds, ensuring enhanced security, scalability, and manageability.

Why Us

Make in India Compliance

Supports Make in India initiative, ensuring compliance with local manufacturing and innovation standards to boost the nation's economy and data sovereignty

Reliable After-Sales Service

Proactive system monitoring, regular health checks, dedicated account management, and continuous updates, ensuring your cloud infrastructure operates smoothly and efficiently.

Data Privacy Security

Enhances cloud security by ensuring that only secure devices can access cloud applications, implementing zero trust principles and robust patch management.

Long-Term Cost Predictability

Fixed-cost models using on-premises infrastructure or colocation services provide a cost-effective alternative to the potentially high expenses of pay-as-you-go public cloud pricing.
